

SUCCESS STARTS EARLY

Improved Prosthetic Outcomes Begin Before Amputation

Pre-Operative Amputation Consultations

Scheduling pre-op consultations for amputee patients may improve patient compliance, satisfaction, and outcomes. Our goals for a Hanger Clinic pre-op consultation are to:

- Help set realistic expectations for the patient and their loved ones
- Reduce anxiety through an AMPOWER® peer visit
- Establish a relationship with the prosthetic team
- Educate the patient and their family to minimize questions directed at surgery staff

YOUR HANGER CLINIC TEAM

We provide patients with education regarding immediate post-op care to improve their post-surgical and long-term outcomes. Hanger Clinic gives you a single point of contact to facilitate seamless communication between all medical professionals. Our team includes:

- **Community Care Coordinator** – Coordinates post-op prosthetic care, including daily in-hospital check-ins, continued follow-up at rehab, attendance at physician appointments, and AMPOWER® peer support with the goal of improving patient outcomes and compliance
- **Prosthetist** – Clinical staff member leading the prosthetic design, which begins with building a strong relationship with the patient

AMPOWER PEER SUPPORT NETWORK

AMPOWER consists of a nationwide network of trained peer mentors who have successfully recovered and rehabilitated following an amputation. Mentors are available to speak face-to-face, over the phone, online and through e-mail.
